

Crimsafe doors are attractive and strong

Secure, attractive sliding doors ...

... and windows

Patio enclosures

Sliding doors

Crimsafe allows you to keep or enhance your lifestyle. Because you can leave regular doors and windows open, you can keep a cool house in summer and enjoy fresh air all year round without compromising your security.

Our doors and windows come in many different frame styles and a full range of standard colours, to match your home or business.

Visibility through Crimsafe mesh is unhindered. Crimsafe is a flyscreen as well as a security screen.

We also have a range of products designed to let you escape quickly in an emergency. The Safe-S-Cape range of products are a keyless exit system for windows. Although effortless to open from the inside, they feature Crimsafe's Screw-Clamp system plus a triple "anti-jemmy" system, which makes them just as hard to penetrate from the outside as all our other products.

Our patio enclosures allow you to secure an exterior area from burglars and mosquitoes.

The Crimsafe 10 year general warranty

Crimsafe Security Systems warrants the original purchaser of the Crimsafe Security Products that they are free from defects in materials supplied by Crimsafe Security Systems under conditions of normal use for a period of ten years from date of installation. This warranty is not transferable.

Please refer to our Warranty & Care Guide for more information. The Crimsafe Licensee that installs your Crimsafe Security Products will provide you with a copy.

CRIME PREVENTION PARTNERS

There's a Crimsafe Licensee in your area

We currently have more than 130 licensees right around Australia, in every major city. Go to www.crimsafe.com.au to find your nearest Crimsafe licensee.

Crimsafe is in the details...

Your local Crimsafe Licensee has highly skilled salespeople and installers with extensive knowledge and experience in the security industry. They utilise the latest advances in security systems including patented, tamper resistant screws. These can't be unscrewed with any ordinary driver tool. The driver tools they use are unique to Crimsafe Security Systems. Crimsafe keeps a register of who has each driver tool for your added security and protection.

"Beat more burglars with the only security mesh that uses Screw-Clamp™ technology."

Why Crimsafe beats more burglars

1. We Screw-Clamp™ our mesh to give it enormous strength under attack

Only Crimsafe Screw-Clamps security mesh to the frame with tamper-resistant screws that go right through a metal clamp, through the mesh and into the frame. This gets repeated every 125mm around the frame.

The patented Screw-Clamp hooks into the aluminium frame and with its lever action creates a “single frame member” effect, meaning impacts are absorbed by spreading the load around the whole frame. And when screwed down, special teeth in the Screw-Clamp and frame “bite down” on the profile of the mesh to grip it tightly (See diagram opposite).

This result gives Crimsafe its enormous strength against attack.

Crimsafe's tougher Screw-Clamp design

2. Our 304 Security mesh is 26.5% thicker, so it's harder to break or cut

At 0.9mm in diameter Crimsafe's Tensile-Tuff stainless steel security mesh is up to 26.5% cross sectional thicker than most other mesh products on the market, making it stronger and harder to cut or penetrate.

We developed Tensile-Tuff specifically for use as a security screen product that would also be an effective insect screen and look great both inside and out. Made from 304 grade stainless steel wire, it has a special high tensile and elongation factor which gives it strength and the ability to be woven into a very tight aesthetically pleasing mesh.

Tensile-Tuff utilises its Category 4 Cyclone Missile and Ballistics rating as a proven strength advantage over other steel mesh products.

Being a high grade stainless steel our Tensile-Tuff mesh also resists corrosion in coastal areas and harsh environments.

Thicker, stronger stainless steel mesh

3. Mid-rails come as a standard option to make our doors even stronger

Although all Crimsafe doors can be made without mid-rails, a mid-rail gives you these 5 great benefits:

1. It stiffens a door or enclosure, to resist attack.
2. It strengthens door locks against jemmy attacks.
3. It protects the hinges on a door by reducing a criminals ability to lever the door from the wall.
4. It acts as a visual warning to prevent you from walking through an apparently open space.
5. It can become an architectural feature to give your screens and doors more flexibility in design.

Mid-rails for extra strength, security and safety

1 The patented Screw-Clamp and hook feature transfers the force of an impact around the frame, so the mesh remains intact and the unit is able to withstand enormous impacts. In fact, all our standard domestic products are rated to resist Category 3 cyclones.

2 Tamper-resistant stainless steel screws, exclusive to Crimsafe screens, are driven right through the clamp and mesh and into the frame on the other side, to give the screen amazing strength. Crimsafe is the only security screen to feature mesh screwed into place like this, giving it unrivalled resistance to attack.

3 Only Crimsafe features specially developed 0.9mm diameter Tensile-Tuff Security Mesh. Developed from Premium Grade 304 high tensile stainless steel, it is the strongest mesh of its type, and is designed specifically for security.

4 The Crimsafe clamp and frame have special teeth designed to match the profile of the mesh and “bite down” on it with a vice-like grip.

5 The Santoprene rubber insulator is so revolutionary it has its own separate patent. It reduces water penetration and salt buildup in harsh environments and virtually eliminates galvanic corrosion of the different metals – meaning a very long life for your screens. Santoprene does not degrade after prolonged exposure to ultra violet light (sunlight).

We exceed Australian Standards

Crimsafe has exceeded all the Australian Standards for security doors and windows, as well as some Industry Standards that are not compulsory but are testament to our products great strength...

Australian Standard 5039 – 2008 specifies these tests:

- Dynamic Impact Test
- Jemmy Test
- Pull Test
- Knife Shear Test
- Shear Test
- Probe Test

Crimsafe has also passed these Industry Standards:

- Curtin University Category 3 Cyclone Missile Test
- BHP Category 4 Cyclone Missile Test (Commercial Grade Crimsafe Only)
- BHP Category 4 Cyclone Ballistics Test (Commercial Grade Crimsafe Only)
- CSIRO Fire Attenuation Test
- Dulux and Chemetall 1000-hour Salt Spray Test

Find out more about the UNSW@ADFA impact tests results + see the real video online at www.crimsafe.com.au

Crimsafe Fire Tuff screens are bushfire compliant and CSIRO tested for fire attenuation.

- Crimsafe Fire Tuff screens meet the screening requirements of AS3959-2009 up to BAL-FZ
- CSIRO testing shows Crimsafe Fire Tuff screens will reduce the intensity of radiant heat flux and naked flame by up to 45%

Commercial Crimsafe for your business

For our commercial systems, we:

1. Multiplied by 5 the number of tamper-resistant screws holding the clamp together – there's one every 25mm.
2. Drilled them in a staggered fashion to dramatically increase the strength and holding power of the system.
3. Doubled the clamp-to-mesh contact area for extra vice-like grip, and
4. Increased the thickness of the aluminium frame by more than 60% to repel any human attack.
